DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Newgard et al (US 4,874,377).

Claims 1-3, 5-7, 9-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Tauschinski (US 4,387,879).

Tauschinski teaches all the claimed subject matter including a piercing ring (10), and an elastomeric seal with a central slit (col. 3, lines 17-18). Further, although not explicitly classified as a male luer, the “cone fitting” described in Tauschinski is the same structure as that of a “male luer.”

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tauschinski in view of Jepson et al (US 5,957,898).

Tauschinski teaches all the claimed subject matter including the use of the device with many elongate instruments (abstract), but does not explicitly teach use with a guidewire. Jepson teaches a similar device wherein a guidewire is taught to be used in conjunction with it (col. 12, line 59). In view of the teaching in the abstract of Newgard, it would have been obvious to one of ordinary skill in the art that the device of Newgard would be effective in preventing leakage during usage of a guidewire in the well-known manner taught by Jepson.

Claims 8, 15, and 17-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tauschinski in view of Newgard et al.

Tauschinski teaches all the claimed subject matter except for the cavity on the seal, specifics about what devices are inserted through the valve (e.g. needle/hub, stylet), and that the cannula is a needle with a sharp tip. Newgard teaches a cavity on the seal to receive a piercing member and thereby guide it through the opening. Newgard also teaches the specific instruments claimed to be inserted through the valve, along with the distal cannula being a sharp needle (60). It would have been obvious to one of ordinary skill in the art to include the cavity of Newgard on the seal of Tauschinski, in order to better guide the piercing member through the slit in the seal. It would also have been obvious to insert any of a number of elongate medical instruments, particularly needle/hub combinations, through the valve (as taught by

Newgard), particularly since Tauschinski does teach that the catheters inserted do have introducer needles. Lastly, it would have been obvious to one of ordinary skill in the art to utilize the valve structure of Tauschinski with a sharp needle, as taught by Newgard in order to

Again, the relevant passages in Newgard are the following:

Column 1, lines 28-30, and 33-35;

Column 6, lines 29, 44, 56-57, and 67;

Column 8, lines 25-32;

Column 9, lines 22, and 35.

Response to Arguments

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

This action is hereby made NON-FINAL in view of new grounds of rejection.
